

Synchronise and share mobile content - and host it yourself

AppTec Content Management Package

Sharing presentations or uploading maintenance reports at the customer's - mobile working thrives on employees sharing files with colleagues and partners. The AppTec Content Management Package contains all components for secure file storage and easy file access from outside.

Manage sensitive company data centrally and securely:

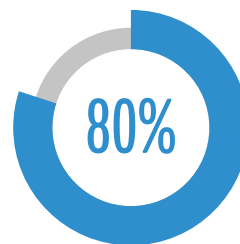

With AppTec ContentBox, you store sensitive corporate data securely and centrally in your own data center. You protect and manage your data with the security and management tools already in place and, of course, in accordance with your organization's IT policies.

If corporate data is accessed via a browser, Secure Browser can be used to define rules for use, such as preventing uploads and downloads or specifying an access password.

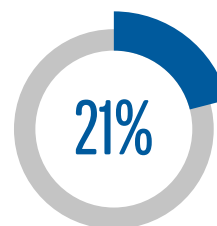

The decision on which servers AppTec ContentBox is installed and where files are stored (internally or cloud storage services) is made solely by the IT department. AppTec ContentBox is easy and intuitive to use - even via mobile devices.

With AppTec ContentBox, you retain full control over all accesses thanks to the logging module. You can easily integrate the filesync and fileshare solution into existing user directories as well as into an existing Active Directory.

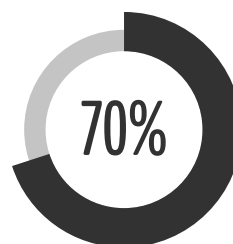

Good reasons for the AppTec Content Management Package:

80% of employees worldwide use cloud services to share files with colleagues

21% of employees lose productivity due to document management problems.

70% of companies that store their data in the public cloud have experienced a security incident.

(Source: Finances Online)

Scope of services and benefits:

Content Management: Management and controlled external access to sensitive company data.

Content Storage: Secure Storage for mobile company data.
